PROFESSIONAL SUMMARY

Full-stack web developer and UI/UX designer with hands-on experience delivering a government-grade Event Management System from requirements gathering through production deployment. Proficient in HTML5, CSS3, JavaScript, PHP, MySQL, Figma, and Adobe XD — skilled at translating stakeholder needs into responsive, accessible, user-centered interfaces. Committed to clean code, systematic testing, and design solutions that serve real operational goals.

EXPERIENCE

Local Government Unit (LGU) of Ormoc

Jan 2026 – Apr 2026

Web Developer & UX/UI Design Intern

Ormoc City, Leyte

- Conducted requirements-gathering sessions with 3 programmers, translating operational needs into a prioritized feature list that scoped a 6-module event management system
- Delivered end-to-end UX design — from information architecture and user flows to high-fidelity interactive Figma and Adobe XD prototypes — enabling stakeholder sign-off before development began
- Built a full-stack Event Management System (HTML5, CSS3, JavaScript, PHP, MySQL + Bootstrap) from scratch, delivering a responsive, mobile-first web app for LGU Ormoc to manage public events and attendee registrations
- Architected six core modules — admin dashboard, online registration portal, attendee database, public event listings, scheduling, and automated report generation — reducing manual event-tracking workload for LGU staff
- Performed full QA cycle including functional testing, bug triage, and cross-browser/device compatibility checks, achieving a stable production-ready release within a 3-month timeline
- Implemented secure user access control and data-storage architecture aligned with government data privacy standards and institutional branding guidelines
- Presented bi-weekly progress to LGU ICT stakeholders, incorporating three rounds of iterative feedback to ensure alignment with city service goals; produced technical documentation, user guides, and operational manuals for handoff

SKILLS

Core Skills: UI/UX Design, Web Development, Responsive Design, Wireframing, Prototyping, Information Architecture, User-Centered Design
